

## Special Buy Rycom ClampMitter

Dear NULCA members, Access Detection would like to offer our members a special group buy. Many of you already know of or own a ClampMitter along with the versatility it offers users in the field of locating. It is currently available in a 100mm version and a 165mm version.

A 50mm ClampMitter would be the ideal size to use on Telstra network cables. After discussion with Rycom Instruments they have said they will commit to build a 50mm version if we see a good order from Australia. To entice buyers in to committing to this purchase we are doing very special price of **\$1,099.00 excluding GST** + freight from Sydney to your destination. Considering a standard 50 mm cabled clamp is more than \$700.00 you could own a self-contained ClampMitter which has the power equivalent of a 5+- watt transmitter, in one easy to use product. The unit is available in 33, 65 and 131 kHz (compatible with most common locator receivers).

**SPECIAL TERMS OF SALE:** To participate in the group buy, please contact [Anthony@accessdetection.com.au](mailto:Anthony@accessdetection.com.au). This special buy is for the 50mm ClampMitter. The sale will go ahead if we get enough interest from members. Once we get the numbers, we will then contact you for a 50% deposit this will ensure you receive the special price. You can order more than one. This is a one-time offer for NULCA members only.

**PLEASE NOTE:** As the unit is being manufactured for the Australian market there will be an 8–10-week delivery period. Hopefully just in time for a Christmas.

If you have any questions about the ClampMitter please do not hesitate to contact Anthony.

Better still see Ben from Geelong cable locates review of the ClampMitter on the link below.
